The Physicians' Health Initiative for Radiation and Environment (**PHIRE**) is an independent association of medical doctors and associated specialists assembled for the purposes of improving education regarding health effects of non-ionising radiation. We collate research produced globally on this issue, share and critique it and also conduct our own research.

We use the resulting knowledge to help educate ourselves and others, improve best practice guidance, and facilitate the protection and support of vulnerable groups.

Present Agenda

Guidance documents
Create guidance documents regarding use of extremely low frequency (ELF) and radiofrequency (RF) radiation in schools and other public areas frequented by vulnerable groups.

Support
Support medical professionals, educators and parents in promoting electromagnetic health for children in school and home environments.

Funding
Achieve funding for research into Electromagnetic Hypersensitivity (EHS).

Research
Research clinical characteristics of EHS and current diagnostic and management tools.

Advice
Provide advice to medical professionals regarding diagnosis and management of EHS and create formal guidance documents for consistent, state-of-the-art care.

Academic programs
Facilitate the construction of academic programs for medical professionals.

Campaigns and Lectures
Provide, promote and support awareness campaigns and lectures to improve public education regarding current scientific understanding.

Connect and Collaborate
Optimise global academic connections for current knowledge sharing and research collaboration.

Unite
Make clear our concerns regarding current policy to PHE / DOH in the hope of constructive dialogue to optimise an improved and united approach.
